Summary

Full Stack Engineer with **6+** years of experience designing and delivering production systems end-to-end, specializing in **React, Angular, Node.js (Express/NestJS), Python (Django), and TypeScript**. Proven track record of owning **backend architecture, API design, and CI/CD automation** across four companies — including secure infrastructure for a German security authority. Experienced with **Docker, Kubernetes, PostgreSQL, and AI-assisted development workflows (Claude Code, GitHub Copilot)**.

Skills

Programming Languages	Javascript , Typescript , Python
Frontend Stack	Angular , React , Next.js , HTML5, CSS3 , NGXS , Angular Material , Tailwind
Back-End Stack	Node.js (NestJS, Express), Django REST Framework, PostgreSQL, MongoDB, MySQL, Redis
DevOps and Cloud	Docker, Kubernetes, CI/CD (GitLab CI, GitHub Actions), Prometheus, Grafana
Version Control	Gitlab , Git
AI Development Tools	Claude Code, GitHub Copilot, OpenAI Codex
Other Tools	Postman , Webstorm , VS Code , PyCharm
Languages	English (C1) , German (A2)

Experience

Bamberg, Germany
May 2025 – June 2026

KYL Software GmbH, Software Development Engineer

- Designed and built a secure in-house network bridge (Gateway A→B) in **Node.js for a German security authority**, replacing a third-party solution and giving the team full control over all cross-server microservice communication (20K requests/day).
- Implemented HTTP-to-WebSocket tunnelling, dual **Ed25519 signature verification**, idempotency guarantees, and **Redis response caching**.
- Containerized backend services using **Docker**, improving deployment consistency across development and production environments.
- Implemented cross-cutting middleware layers (authentication, access control, request signing, idempotency, caching) with full **TDD coverage** and structured observability (**Winston logging + Prometheus metrics**).
- Led development of a financial controlling backend (**Node.js/Express with OpenAPI-driven, PostgreSQL/Sequelize**) for Lupp Facility Management GmbH — designed the data model for contracts, task orders, and cost positions, and delivered **OAuth2 role-based authentication**, Excel reporting, data import pipelines, and a HATEOAS middleware layer.
- Built the **Angular** frontend for the Lupp project and wrote **Cypress** end-to-end tests for it; mentored a junior developer on the project. Performed code reviews on other German security authority projects at KYL, beyond own project scope.

Rödental, Germany
Feb 2023 – Dec 2024

Vebasoft GmbH, Software Development Engineer

- Improved an intuitive web application that was tailored for advanced football scouting and analytics using **Angular**, **Angular Material**, and **Chart.js**.
- Utilized **NestJS** to process football match datasets and integrated data from **3+** sources for real-time analytics.
- Utilized **NGXS** state management and implemented backend testing with **Jest**, ensuring efficient data handling, code reliability, and high-quality APIs.
- Designed and automated the **GitLab CI/CD** pipeline end-to-end, reducing deployment times by **30%** and enabling multiple production releases per week.
- Worked directly with clients to translate requirements into features — redesigned the player profile UI and score visualization module, boosting user engagement by **50%**.

Mumbai, India
Nov 2021 - Dec 2022

Hire Digital, Software Development Engineer

- Worked within an **npm Workspaces monorepo** spanning 7 packages, redesigning and redeveloping the talent-matching website using **Next.js** — including a scalable blog component managing 300+ blogs — while consuming shared UI components from the internal @hiredigital/ui library.
- Developed a new client registration interface using **ReactJS** and **Django REST APIs**, and enhanced the call-scheduling component of HireDigital's React-Django web portal.
- Developed **GitHub Actions** scripts across multiple monorepo workspaces for automated testing, building, and deployment of the company's web platforms.

Pune, India
Dec 2019 - Sept 2021

Maverick Labs, Software Development Engineer

- Built and maintained full-stack Django REST Framework applications, including a supply chain audit platform serving **20+ European mining sites** and a rumor monitoring system operating across 10+ countries
- Designed and implemented backend features such as supplier questionnaires and data-driven workflows, ensuring reliability through **test-driven development (pytest)** and structured Agile delivery practices.
- Developed an educational platform using **Strapi (Node.js)** and **ReactJS**, connecting students from **170+** colleges with job opportunities, including modules for registration, document uploads, and eligibility filtering.

Education

Aug 2017 – May 2020

Master of Science in Industrial Mathematics with Computer Applications

Fergusson College, Pune, India

Jun 2014 – May 2017

Bachelor of Science in Mathematics

University of Mumbai, India

Projects

Sept 2019

Location-Based Augmented Reality For Indoor Navigation

- Built an Augmented Reality Android application, which facilitated indoor navigation inside the college campus.
- Tools Used: C#, Unity, SQLite
